

FEATURES

- SIP package
- Efficiency up to 81%
- High power density
- No external component required
- Isolation voltage: 3K VDC
- Operating temperature range: -40°C to +105°C
- International standard pin-out
- continuous short circuit protection

DEZ_S1P & DFZ_S1P Series

1W, Fixed input voltage , isolated & unregulated

dual/single output

DEZ_S1P DFZ_S1P series is specially designed for applications where an isolated voltage is required in a distributed power supply system. It is suitable for

1. Where the voltage of the input power supply is stable (voltage variation: $\pm 10\% \text{Vin}$);
2. Where isolation is necessary between input and output (isolation voltage $\leq 3000 \text{VDC}$);
3. Where do not has high requirement of line regulation, load regulation and low ripple noise;
4. Such as: pure digital circuits, low frequency analog circuits and relay-driven circuits.

Design Reference

1. Typical application

If it is required to further reduce input and output ripple, a filter capacitor can be connected to the input and output terminals, see Fig.3. Moreover, choosing suitable filter capacitor is very important, start-up problems may be caused by too large capacitance. To ensure the modules running well, the recommended capacitive load values as shown in Table 1.

Dual Output

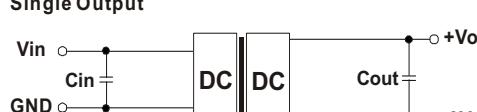

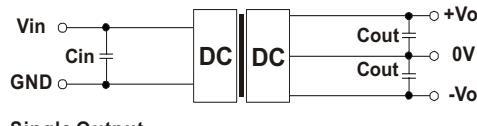

Fig.3

It is not recommended to connect any external capacitor when output power is less than 0.5W.

2. EMC typical recommended circuit (CLASS B)

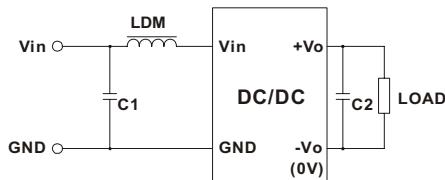

Fig. 4

Input voltage(VDC)		3.3/5/9/12/15/24
EMI	C1	4.7μF /50V
	C2	Refer to the Cout in Fig.3
	LDM	6.8μH

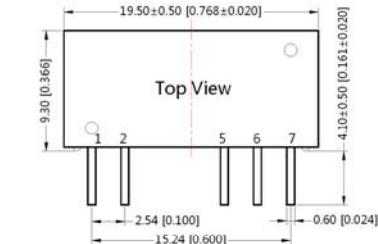

Note: It is not needed to add the component in the peripheral circuit when parameter with the symbol of "--"

3. Output load requirements

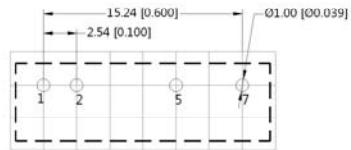

To ensure the module work efficiently and reliably, during the operation, the min. output load should be no less than 10% of the full load. If the actual output power is low, please connect a resistor to the output terminal in parallel, with a recommended resistance which is 10% of the rated power, and derating is required during operation.

Notes:

1. If the product is operated under the min. required load, the product performance cannot be guaranteed to comply with all performance indexes in this datasheet;
2. The max. capacitive load should be tested within the input voltage range and under full load conditions;
3. Unless otherwise specified, data in this data sheet should be tested under the conditions of Ta=25°C, humidity<75% when inputting nominal voltage and outputting rated load;
4. All index testing methods in this datasheet are based on our Company's corporate standards;
5. The performance indexes of the product models listed in this manual are as above, but some indexes of non-standard model products will exceed the above-mentioned requirements, and please directly contact our technicians for specific information;
6. We can provide product customization service;
7. Specifications of this product are subject to changes without prior notice.
